

Series 160 Overview

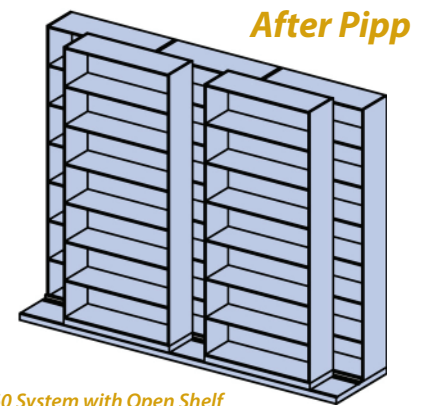

Pipp's Series 160 Manual Lateral Mobile Modular Deck Storage System is a freestanding system designed to simplify installation, expansion and relocation. This system consists of a rear row of stationary shelving or cabinets plus 1 row (Bi-File) or 2 rows (Tri-File) of mobile units installed in front. To access the rear row of files, simply push the easy rolling front mobile unit to the side. The Series 160 System, with its modular deck, lay-on-the-floor design and built-in anti-tip, provides the quickest, easiest and most economical mobile solution to increase filing and storage and adapt to changing storage needs. This system supports L&T 4-Post and Stackable file shelving in letter (12") and legal (15") size depths and standard widths of 36", 42" & 48". The system can also be designed for L&T 4-Post, X-Ray Shelving and Lateral File Cabinets 18"D x 36"W. The Series 160 system is ideal for office filing, binder storage, supply storage and medical/dental records. This system can also adapt to HIPAA requirements for medical records applications when security doors are applied to the shelving. Consult your Pipp professional for assistance in space planning ideas.

Lateral Mobile Concept

Create more space by eliminating fixed aisles and file consuming drawers and their expensive suspensions. Simply slide units side-to-side to access rear row!

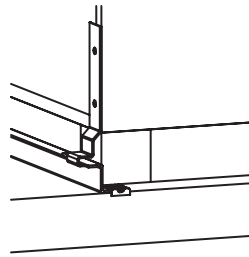

Traditional Four-Drawer Lateral Files with a 36" aisle uses 54 Sq. Ft. and holds 816 Lateral Filing Inches (LFI).

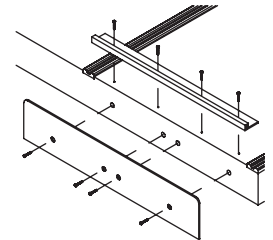

Series 160 System with Open Shelf Files provides 1,190 Lateral Filing Inches (LFI) in just 21 Sq. Ft. of space!!

Series 160 Component Features

||||| **Anti-Tip System** utilizes deck mounted anti-tip rail and anti-tip retention arms mounted directly to shelving enhancing system safety.

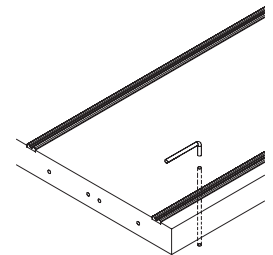

||||| **End Stops** are installed at both ends of modular deck to prevent carriages from rolling off. Easily removed to allow for growth of system.

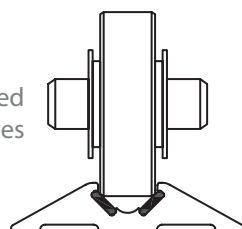

||||| **Decks & Pre-Installed Tracks** Pre-Installed tracks embedded in a solid deck provide a low profile stepping area. Low profile, durable, scuff resistant finish on all sides of modular deck.

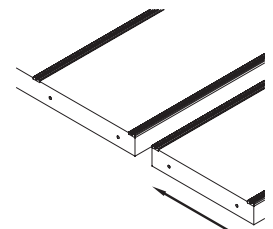

||||| **Deck Leveling** screws are accessible from the top of the deck providing faster leveling and more accurate results.

||||| **Wheels** glide along modified aluminum "V" Track. With hardened steel inserts, the "V" design reduces friction and provides positive carriage retention.

||||| **Tri-Stor®** allows for addition of second row of mobile shelving units, increasing system capacity in a minimum of space.

Series 160 Case Study

Before Pipp...

Storage Issue: Our Dealer's client was facing a common problem of running out of file storage space, plus they thought the file retrieval procedure was inefficient. Before Pipp, their storage configuration, holding expandable files, consisted of (2) 6' high / 5 tier Rotary File Cabinets that provided just 250 Linear Filing Inches (LFI) each.

After Pipp... Increase in LFI with Improved Visibility & Access!!!

Mobile Storage Solution: Pipp installed 3/2 Series 160 Mobile System. This Manual Lateral Modular Deck System consists of (3) stationary open shelf L&T shelving units in the rear and (2) open shelf L&T shelving units on Series 160 lateral carriages in the front. Each 36" wide, 7' high shelving unit provides 238 LFI; the (5) shelving units together will provide a total of **1,190 LFI** in just **under 21 square feet** and the new system improved access to the files.

Testimonials...

*"Although the contractor had never installed a Series 160 system before, the job was done and the files transferred to the new shelves the same day. The experience we had with this first system convinces Theresa and I that we will look for more opportunities to sell Pipp Mobile, and especially this Series 160 lateral system."
Dealer in Raleigh, NC*

*"This system is exactly what we needed to replace the old rotating cabinets. Carriages require little effort to move, even fully loaded, and the files are right there for easy access. Although it will be a while before we'll need to expand this system, it's nice to know that will be a simple, painless process when the time comes. I've come to count on Kim and Theresa's design experience and their affiliation with Indoff to bring us product solutions, like this, that work."
