

## Shelving Solutions

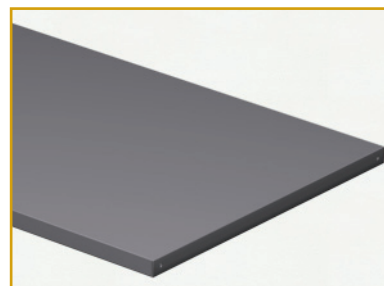

**Rivet Style Shelving** combines easy assembly with structural integrity. The positive rivet connection is joined with 14-gauge angle post to create a rigid framework ideal for high density shelving. The two-way keyhole slots and snap-in rivet design provide for simple installation. There are no clips, braces or additional hardware needed. Various shelf decking options include particle board, metal, circle perforated metal and wire grid. The shelves can be adjusted in 1-1/2" increments for optimum flexibility. The rivet shelving parts are available in a wide variety sizes to fit specific storage requirements. Rivet Style Shelving has a weight capacity of 400 - 600 lbs. per shelf (depending on size).

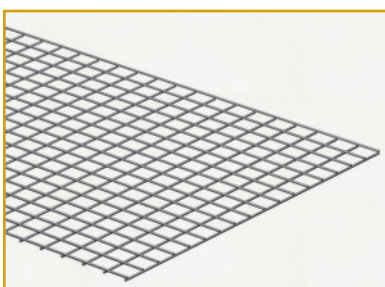

## Shelf Decking Options

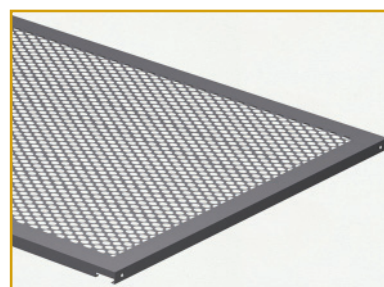

**Particle Board**  
5/8" Thick

**Metal**  
22-Gauge

**Wire Grid**  
2" x 4" or 1" x 4"  
Openings

**Circle Perforated**  
22-Gauge
