

Electrical Mobile System

Electrical Mobile System was introduced in 2002 and is now operating in over 100 installations. The modular design of the product requires minimal on-site mechanical assembly. Electrically, the majority of the wiring is completed at the factory; only 7 electrical connections per carriage are required during installation. One 20 amp circuit can run 5 carriages. The system is UL approved and uses standard industrial components. The carriages can be operated in a manual and automatic cycle. Each carriage has 3 safety systems; lower photo eye, optional upper photo eye and stall sensor. The maximum carriage length is 36', depth of 72" with a maximum rated load of 45,000 lbs.
